GENERAL YOGURTINI PRODUCT INFORMATION:

Yogurtini frozen yogurt is carefully crafted to contain high levels of beneficial live and active yogurt cultures. These cultures are probiotic and are considered beneficial to be present in the intestinal tract of the human body to insure proper balance needed for digestion and good health. Yogurtini yogurt cultures include: *S. thermophilus*, *L. bulgaricus*, *L. lactis* and *L. acidophilus*. Yogurtini Frozen Yogurt is never heat treated after culturing. All this attention to quality ensures that you receive the healthy benefits of the living yogurt cultures in a creamy delicious frozen dessert.

Yogurtini's sweet profile frozen yogurt contain 100-200 million cultures per gram of beneficial live and active yogurt cultures. Yogurtini's tart profile frozen yogurt contain 300-400 million cultures per gram of beneficial live and active yogurt cultures. The National Yogurt Association requires 10 million cultures per gram of live and active yogurt cultures to qualify for its seal program.

*Meets the National Yogurt Association criteria for live and active frozen yogurt cultures.

No Sugar Added Yogurts (NSAs): We do not add sugar to this line of yogurts, but there are naturally occurring sugars in some of the ingredients. The sugars are listed in the nutrition facts panel. Milk, nonfat dry milk and whey all contain lactose, a milk sugar. The products with fruit will have a higher sugar level due to the naturally occurring fructose in the fruits. The NSA products are sweetened with the high intensity no calorie sweeteners sucralose and Ace K (Acesulfame potassium). Sucralose is 600 times sweeter than sugar. Sucralose starts from sugar, but goes through many chemical processes so it is considered an artificial sweetener. Ace K is 200 times sweeter than sugar and is also categorized as an artificial sweetener.

A blend of these 2 sweeteners is used due to their synergistic effect. They taste more like natural sugar in the finished goods and do not leave a bitter or artificial aftertaste. The sweeteners are added at less than .05% in the finished goods.

Nonfat and Premium Yogurts: The sweeteners in the Nonfat yogurts are a blend of sugar and corn syrup. All flavors are High Fructose Corn Syrup-free (HFCS) except the nonfat Cookies and Cream and Thin Mint Cookies flavors. The HFCS in these two items is contained in the cookies only. Some believe that our bodies react differently to HFCS than it does to other sugars. HFCS is created from corn syrup. It undergoes an enzymatic process that makes it sweeter.

Ingredient Statements: The ingredients are listed in order of predominance, most to least. When it comes to which ingredients affect the flavor, essentially all of them do. If there is not enough sweetener, the chocolate will be bitter; if the citric acid is too low, the sorbet can taste flat or too sweet, or the flavor of the fruit will not come out. Of course the added flavors and the fruit preps all add flavor, but their flavors will not come out if the other ingredients are not added and balanced correctly.

Stabilizers: These are added for texture (aid in the overrun) and stability (reduce melt) in the finished goods. Stabilizers are added at less than 2.0% in the finished goods.
